UGBA117 — Energy and Environmental Markets

Haas School of Business, Spring 2012 (3 Units)

This course is about energy markets. It is designed to give class participants practical experience in making connections between economic concepts and real world regulatory policy questions in a set of extremely important, interrelated markets. How do energy markets work? When and how should the government regulate energy markets? How should we think about carbon dioxide emissions and other environmental externalities? What is the role for energy efficiency, innovation, and incentives?

Instructor: Lucas W. Davis – ldam@haas.berkeley.edu
Course Prerequisites: UGBA 101A (Microeconomics Analysis) or equivalent
